Contents

1 Introduction **1**
- 1.1 Why Distributed Multimedia? . . . 3
- 1.2 Limitations of Client/Server Streaming . . . 4
- 1.3 Towards Network-Integrated Multimedia Middleware . . . 4
- 1.4 Goals of this Thesis . . . 5
- 1.5 Main Contributions of this Thesis . . . 8
- 1.6 Outline of this Thesis . . . 10

I Foundations of Multimedia Middleware **15**

2 Foundations of Locally Operating Multimedia Systems **17**
- 2.1 Terminology . . . 17
  - 2.1.1 Multimedia . . . 17
  - 2.1.2 Multimedia Architecture . . . 19
  - 2.1.3 Examples for Multimedia Applications . . . 19
- 2.2 Characterization of Multimedia Systems . . . 20
  - 2.2.1 Data Streams . . . 21
  - 2.2.2 Devices . . . 23
  - 2.2.3 Processing . . . 25
  - 2.2.4 Networking . . . 27
  - 2.2.5 Synchronization . . . 30
  - 2.2.6 Quality of Service . . . 32
- 2.3 From Best-Effort to Predictable QoS . . . 35
  - 2.3.1 Hiding Best-Effort . . . 36
  - 2.3.2 Adaptation . . . 38
- 2.4 Common Abstractions . . . 39
  - 2.4.1 Processing Elements . . . 40
  - 2.4.2 Flow Graphs . . . 41
  - 2.4.3 Data Encapsulation . . . 42
- 2.5 Examples for Multimedia Architectures . . . 42
  - 2.5.1 Industry Approaches . . . 42
  - 2.5.2 Open Source Approaches . . . 45
- 2.6 Summary . . . 46

3 Foundations of Distributed Systems 49
3.1 Terminology . . . 49
3.1.1 Distributed System . . . 49
3.1.2 Middleware . . . 50
3.2 Challenges for Distributed Systems . . . 51
3.2.1 Goals . . . 51
3.2.2 General Requirements . . . 51
3.2.3 Transparency . . . 51
3.2.4 Masking out Heterogeneity . . . 52
3.2.5 Openness . . . 53
3.2.6 Reflection . . . 53
3.3 Common Abstractions . . . 54
3.3.1 Programming Models for Middleware . . . 54
3.3.2 Proxy Design Pattern . . . 56
3.3.3 Distributed Objects . . . 57
3.3.4 Implicit and Explicit Binding . . . 59
3.4 Standards for Distributed Object Computing . . . 59
3.4.1 Common Object Request Broker Architecture . . . 60
3.4.2 Reference Model for Open Distributed Processing . . . 62
3.4.3 Discussion . . . 64
3.5 Summary . . . 65

4 Challenges for Distributed Multimedia Systems 67
4.1 Overview . . . 67
4.2 Requirements for Multimedia Middleware . . . 69
4.2.1 Distributed Flow Graphs . . . 69
4.2.2 Network Transparent Control . . . 69
4.2.3 Network Transparent Cooperation . . . 70
4.2.4 Distributed Synchronization . . . 74
4.2.5 Device Discovery and Management . . . 74
4.2.6 Predictable Quality of Service . . . 75
4.3 Additional Dimensions of Heterogeneity . . . 76
4.3.1 Multimedia Devices, Processing, and Architectures . . . 76
4.3.2 Device Discovery and Management . . . 76
4.3.3 Networking and Middleware Technologies . . . 77
4.3.4 System Characteristics . . . 78
4.3.5 Existing Applications . . . 79
4.3.6 QoS Management . . . 79
4.4 Coping with Dynamics and Complexity . . . 79
4.4.1 Adaptation and Reconfiguration . . . 80
4.4.2 User and Device Mobility . . . 81
4.4.3 Seamless Service Provision . . . 83
4.4.4 Collaborative Multimedia Applications . . . 83
4.4.5 Automatic Application Setup . . . 85
4.5 Summary . . . 86

II Network-Integrated Multimedia Middleware 89

5 An Open Middleware Architecture for Network-Integrated Multimedia 91
5.1 Architectural Decisions . . . 91
5.1.1 Open and Integrating Micro-Core Architecture . . . 91
5.1.2 Mediating Proxy Objects . . . 93
5.1.3 Unified Messaging System . . . 93
5.1.4 Object-Oriented Interfaces . . . 94
5.1.5 Reflective Middleware . . . 94
5.1.6 Communication Channels . . . 95
5.1.7 Generic Multimedia Middleware Architecture . . . 96
5.1.8 Local Specialization . . . 96
5.2 Overview . . . 97
5.3 Summary . . . 98

6 An Integrating Communication Framework 101
6.1 Serialization Framework . . . 101
6.1.1 Requirements . . . 101
6.1.2 Architecture . . . 102
6.1.3 Implementation . . . 103
6.1.4 Realized Serialization Strategies . . . 107
6.1.5 Discussion . . . 110
6.2 Unified Messaging System . . . 111
6.2.1 Message Base Type . . . 111
6.2.2 Events and Composite Events . . . 112
6.2.3 Buffers . . . 113
6.2.4 Interfaces for Different Interaction Paradigms . . . 113
6.2.5 Dispatching . . . 114
6.2.6 Discussion . . . 116
6.3 Communication Architecture . . . 117
6.3.1 NMM Object . . . 117
6.3.2 Proxy Object . . . 118
6.3.3 Instream Connections with Jacks . . . 118
6.3.4 Out-of-band and Instream Communication . . . 119
6.3.5 Discussion . . . 120
6.4 Interfaces . . . 120
6.4.1 Base Class . . . 121
6.4.2 Interface Definition Language . . . 121
6.4.3 IDL Extensions . . . 122
6.4.4 Code Generation . . . 123
6.4.5 Discussion . . . 124
6.5 Binding Framework . . . 125
6.5.1 Requirements and Overview . . . 125
6.5.2 Transport Strategies . . . 128
6.5.3 Out-Of-Band Communication Channels . . . 132
6.5.4 Instream Communication Channels . . . 133
6.5.5 Parallel Bindings . . . 133

6.5.6 Establishment of Bindings . . . 137
6.5.7 Realized Transport Strategies . . . 141
6.5.8 Discussion . . . 143
6.6 Summary . . . 144

7 A Generic Multimedia Middleware Architecture 145
7.1 Overview . . . 145
7.2 Nodes as Processing Elements . . . 148
7.2.1 Node Types . . . 150
7.2.2 State Machine . . . 151
7.3 Jacks as Connecting Elements . . . 155
7.3.1 Queueing Model . . . 155
7.3.2 Jack Groups . . . 156
7.4 Multimedia Data Formats . . . 158
7.4.1 Format Definition . . . 158
7.4.2 Modeling Dependencies . . . 159
7.4.3 Quality Model . . . 161
7.4.4 Interacting with Formats . . . 161
7.4.5 Discussion . . . 163
7.5 Distributed Flow Graphs . . . 163
7.5.1 Connection Setup . . . 163
7.5.2 Composite Nodes . . . 164
7.6 Memory Management . . . 166
7.6.1 Buffers . . . 166
7.6.2 Buffer Managers . . . 167
7.6.3 Events and Composite Events . . . 168
7.7 Generic Processing Model . . . 168
7.7.1 Concurrent Processing . . . 169
7.7.2 Generic Base Classes . . . 170
7.7.3 Instream Interaction . . . 171
7.7.4 Examples for Instream Interaction . . . 177
7.7.5 Format Analysis and Instream Format Change . . . 178
7.8 Distributed Synchronization . . . 179
7.8.1 Architectural Elements . . . 180
7.8.2 Sink Synchronization . . . 182
7.8.3 Source Synchronization . . . 187
7.8.4 Remarks on Global Clocks . . . 190
7.9 Developing Plug-ins . . . 191
7.10 Summary . . . 192

8 Summary for Network-Integrated Multimedia Middleware 193
8.1 Performance Evaluation . . . 193
8.1.1 Out-of-Band Interaction . . . 193
8.1.2 Instream Interaction . . . 196
8.1.3 Parallel Binding . . . 199
8.2 Conclusions and Future Work . . . 200

III Middleware Services 201

9 Registry Service 203
9.1 Introduction . . . 203
9.2 Related Work . . . 205
9.3 Architectural Elements and Functionality . . . 206
9.3.1 Representing Plug-ins and Flow Graphs . . . 206
9.3.2 Discovery and Registration of Plug-ins . . . 208
9.3.3 Base Classes and Functionality . . . 210
9.3.4 Processing of Queries . . . 211
9.3.5 Reservation and Instantiation . . . 212
9.4 Results and Applications . . . 212
9.4.1 Programming Model . . . 213
9.4.2 Performance . . . 214
9.5 Quality of Service Management . . . 215
9.6 Conclusions and Future Work . . . 217

10 Automatic Creation of Flow Graphs and Format Negotiation 219
10.1 Introduction . . . 219
10.2 Challenges and Requirements . . . 220
10.2.1 Task specification . . . 220
10.2.2 Valid and Fully Configured Flow Graphs . . . 222
10.2.3 Quality Model for Flow Graphs . . . 222
10.2.4 Quality versus Costs . . . 223
10.2.5 Global Approach versus Distributed Dynamic State . . . 224
10.2.6 Setup Time versus User Satisfaction . . . 225
10.2.7 Discussion . . . 225
10.3 Related Work . . . 225
10.4 Building Flow Graphs . . . 228
10.4.1 Defining Sources and Sinks . . . 228
10.4.2 Building Flow Graphs for Media Playback . . . 229
10.4.3 Backtracking versus Parallel Branched Search . . . 232
10.4.4 Adding Local Quality Decisions to Graph Building . . . 233
10.4.5 Support for Distributed Flow Graphs . . . 233
10.4.6 Extending Graph Building for Arbitrary Tasks . . . 235
10.5 Quality-Driven Format Negotiation . . . 237
10.5.1 Overview and Motivating Example . . . 238
10.5.2 Construction of the Negotiation Graph . . . 239
10.5.3 Quality-Driven Search . . . 241
10.5.4 Discussion . . . 243
10.6 Results and Applications . . . 243
10.7 Conclusions and Future Work . . . 245

11 Session Sharing 247
11.1 Introduction . . . 247
11.2 Related Work . . . 251
11.3 Administration of Shared Flow Graphs . . . 252

11.3.1 Shared Nodes and Edges 252
11.3.2 Storage and Retrieval 253
11.4 Definition of Overlapped Flow Graphs 253
11.4.1 Complete Overlap 254
11.4.2 Partial Copy Overlap 255
11.4.3 Partial Output Overlap 256
11.5 Session Sharing Procedure 257
11.5.1 Overview 257
11.5.2 Finding Overlapping Graphs 257
11.5.3 Valuation of Solutions 261
11.5.4 Setup of Shared Flow Graphs 263
11.5.5 Discussion 263
11.6 Results and Applications 264
11.6.1 Shared DVD Playback 266
11.6.2 Shared TV Access 268
11.7 Conclusions and Future Work 273

12 Seamless Reconfiguration 275
12.1 Introduction 275
12.2 Related Work 277
12.3 Seamless Handover Procedure 278
12.3.1 Master-Slave Approach 278
12.3.2 Specification and Setup of the Slave Graph 281
12.3.3 Establishing a Global Time Base 281
12.3.4 Synchronized Handover 283
12.3.5 Destruction of the Master Graph 286
12.3.6 Extensions and Optimizations 287
12.3.7 Discussion 288
12.4 Results and Applications 289
12.4.1 Programming Model 289
12.4.2 Performance 292
12.5 Conclusions and Future Work 294

IV Applications 297

13 Clic – Command Line Interaction and Configuration 299
13.1 Overview 299
13.2 Case Study – Video Wall 300
13.2.1 Two-Screen Video Wall 301
13.2.2 Two-Screen Video Wall with Overview on Third Screen . . . 302
13.2.3 Dynamically Adding Systems 303
13.2.4 Discussion 304
13.3 Conclusions and Future Work 304

14 Recording and Playback of Presentations 307
14.1 Hardware Setup . . . 307
14.2 Recording Application . . . 308
14.3 Playback Application . . . 310
14.4 Conclusions and Future Work . . . 312

15 Networked and Mobile Multimedia Home Entertainment 313
15.1 Introduction . . . 313
15.2 Related Work . . . 315
15.3 Hardware Setup . . . 316
15.3.1 Stationary Systems . . . 316
15.3.2 Mobile Systems . . . 318
15.4 Application Framework . . . 319
15.4.1 User Interface . . . 319
15.4.2 Architectural Elements and Functionality . . . 320
15.4.3 Application-Level Multi-Tasking . . . 322
15.4.4 Integrating Entertainment Options . . . 324
15.5 Realized Functionalities . . . 324
15.6 Sharing of Resources . . . 327
15.6.1 Simultaneous Live TV and Recording . . . 327
15.6.2 Sharing of Entertainment Options . . . 327
15.7 Seamless Integration of Mobile Systems . . . 329
15.7.1 Rich and Shared Multimedia Entertainment . . . 329
15.7.2 Mobility Support . . . 330
15.8 Conclusions and Future Work . . . 331

V Final Summary, Conclusions, and Future Work 333

16 Final Summary, Conclusions, and Future Work 335
16.1 Summary . . . 335
16.2 Conclusions . . . 341
16.3 Future Work . . . 342

A Systems used for Benchmarks 345
